

WORK EXPERIENCE

MARCH 2013 - JUNE 2013

Software Engineering Intern at Google, Zürich

While looking around in the codebase I was honored to find that all my website urls were featured in it! Specifically as prime examples of content farms to train Google's spam detection algorithms.

SEPTEMBER 2013 - JUNE 2015

Software Developer at Teralytics AG, Zürich

Refactored the entire codebase for the better while coworker was on a roadtrip to Iran. Coworker still took all the credit. I took my laptop with me when I left.

NOVEMBER 2015 - FEBRUARY 2017

Lead Data Engineer at Tracktics GmbH, Zürich

Successful in assimilating company machines into botnets without anybody, not even myself, noticing - no matter which provider was used (AWS, IBM Bluemix).

MARCH 2017 - PRESENT

Software Engineer at siroop, Zürich

Now, this company was great but it closed way too soon, one could say, in the flower of its youth. I am so sad about having to leave that I will probably keep the laptop as well.

CORE COMPETENCIES

Content Farm Creation - I was succesful in manually creating and profiting from content farms in the early 00s. Learning to program made it possible to autogenerate content farms with the best of them.

Team Player - I am very good at refactoring code to my liking when coworkers are away on vacations.

Becoming part of a botnet - I know exactly which security holes to leave open so that production machines can be up and mining cryptocurrencies for Russians in no time.

Attending remote meetings 2 minutes after waking up (video off)

Not returning company hardware - I get attached to the companies I've worked for and want something to remember them by :)
